Fabric Specification

Fabric Name	Colours	Max Width (mm)	Material	Weight (g/m ²)
Gemini	Black Dark Brown Beige Ivory White	2000	100 Polyester	470
Harmony	Black Warm Grey Cool Grey Ivory	2000		237

CUT Screen

Our fabrics have been especially developed over many years to achieve faultless results when cutting, hanging, and installing with the sole aim of a perfect result every time. Our fabrics have passed the flammability certification from Intertek.

Gemini

Gemini is the thickest and has the highest density among all of our fabric line-ups, which gives it a very low transparency and a very firm feel. Gemini would be the primary selection when expressing bold cutting patterns, highlighting silhouette, contrast and sharpness.

*Finish on one side and the other are different for Gemini. One side is matt finish and the other is glossy.

*Transparency Ratio Black:0% White:4%

Harmony

Harmony is woven mainly with a horizontal yarn technique, giving it a particular character. The transparency ratio is higher than that of Gemini, but it can still maintain adequate firmness. Harmony would be the main selection when a more light and softer mood is required, even on non-cut areas of the fabric.

*Transparency Ratio Black:5.5% Ivory:12.5%

Notes:

1. Fabric colors except white and ivory could fade by sun light or lighting with ultraviolet rays.
2. Outdoor use is not supported.
3. Fabric colors seen on display devices may differ from actual ones.
